CIRCULAR MATERIALS / INDUSTRIAL SCALE

eco BRICK Innovio

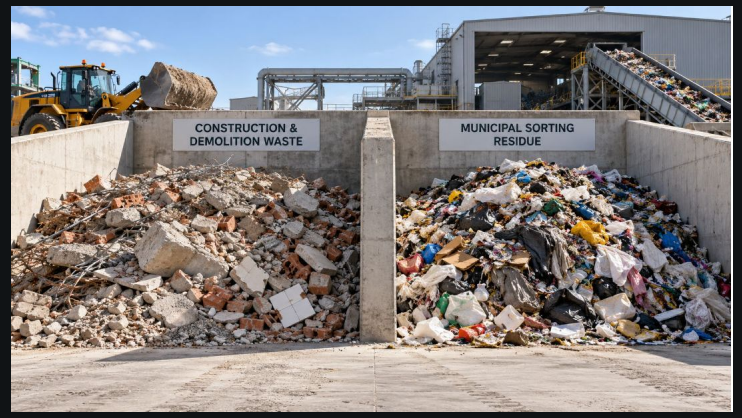

The future of circular construction

Waste becomes the material for what comes next.

THE SYSTEM MUST CHANGE

Linear construction is obsolete: take, make, dispose cannot scale

Take→ make → dispose

The old model ends in landfill.

Make → use → recycle

The new model is regenerative by design.

Landfills cannot absorb these streams indefinitely: plastics, tires, e-waste, textiles, construction debris and beer waste.

The circular economy is the biggest opportunity to transform production and consumption since the First Industrial Revolution.

THE TECHNOLOGY PLATFORM

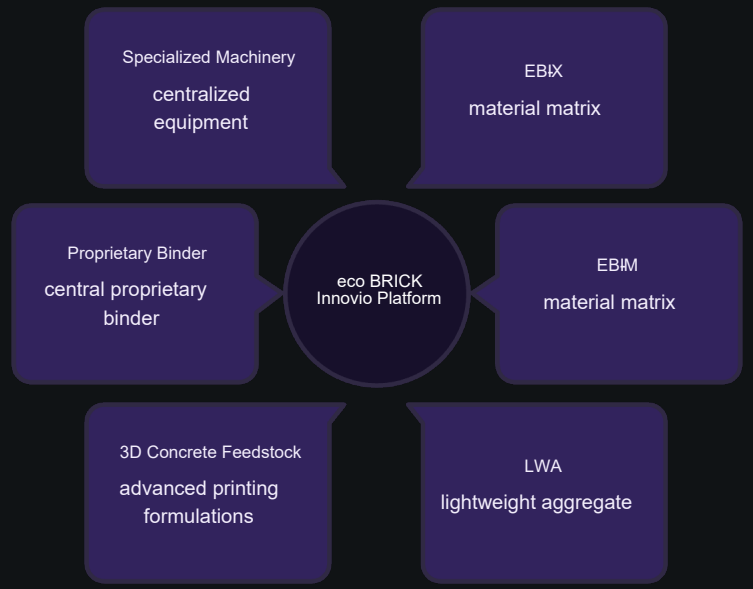

Patented material science at TRL 8

TRL8
Technology maturity

40+
Waste types processed

~99%
Diverted from landfill

No burning
At any stage

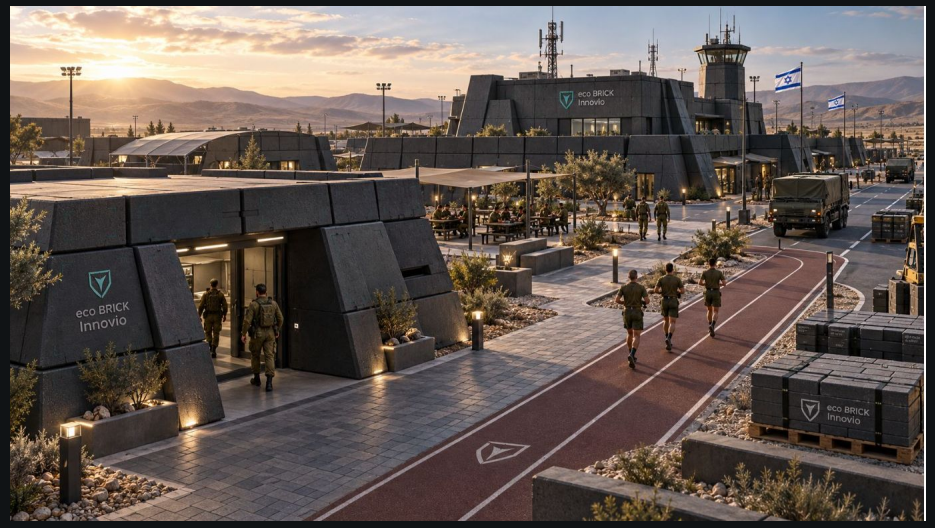

DUAL - USE APPLICATIONS

One material, two missions: civil infrastructure and defense

Civil and municipal

Lightweight concrete, blocks, paving, drainage ducts, manholes, asphalt and self - leveling floors.

Defense, under validation

Rapid deployment, extreme load - bearing and ballistic resistance applications.

Lightweight • Acoustic and thermal insulation • 0.012% water absorption • Salt - resistant

VALIDATION / EVIDENCE

Proven in the lab, the field and the ministry

MATERIAL COMPATIBILITY

ASTM C 331

Lightweight aggregate report # 201338
April 20, 2023

Iron - free. No chemical interaction with cement.

CERTIFIED ISRAELI LAB

0.012%

Water absorption. High resistance to 18 staining substances.

Industrial testing

Partners in waste management and concrete production. Shapir engineering - led testing.

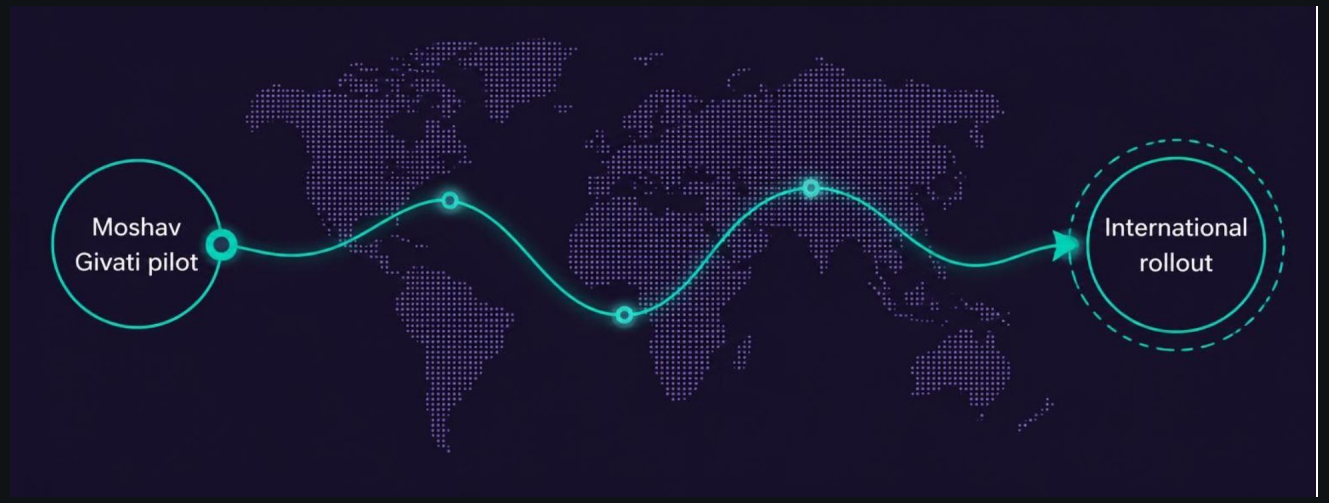

Institutional validation

Municipal waste facility and Ministry of Defense / InnoFense validations.

REPLICATION / SCALE

From the Givati pilot to global deployment

01

R&D

Moshav Givati pilot facility

02

Modular plants

Replicate a familiar factory process close to concrete plants.

03

International rollout

Extend the plant model globally.

Leadership with quarry, plastics, concrete and municipal-waste experience.

INVESTORS & STRATEGIC PARTNERS

Join us in building what comes after landfill

Bring capital, deployment pathways or industrial reach.

Capital

Fund the next stage of scale.

Target amount: [to be added]

Municipal and defense partners

Advance validation and deployment.

Plant licensees

Build local production capacity.

License terms: [to be added]
