eco BRICK: Turning waste into valuable resources

Waste Resources and the Process

99%
waste content
This composition significantly reduces the need for landfills.

- Over 40 different types of waste.
- 20 different binders.
- Over 500K different recipes.

Green Production Without Burning

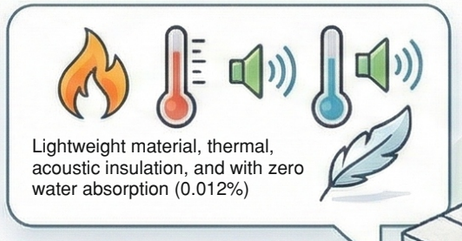

Includes plastics, tires, nylon, PVC, construction waste, black carbon, oil residues, glass, and many other types

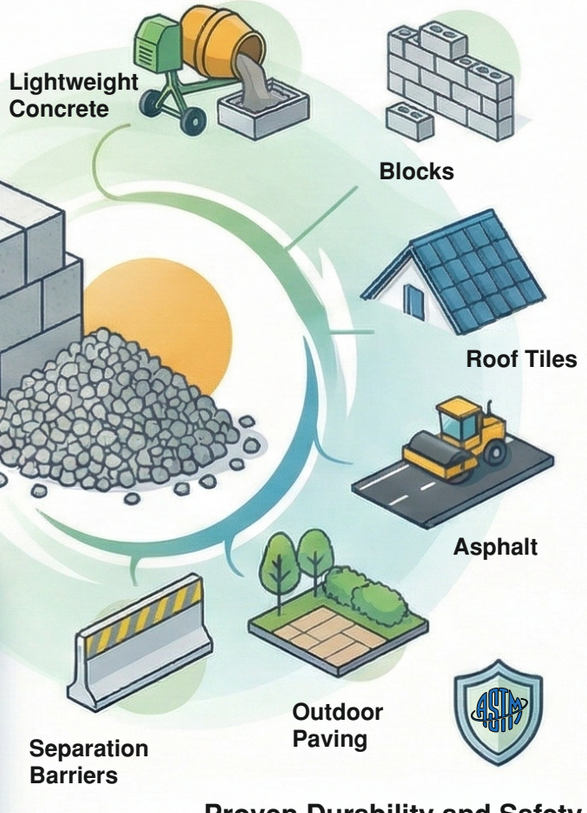

Green Production Without Burning

The production process does not include waste incineration, which emits no pollution and uses unique materials.

Product Applications

Subject	Results &Testing	Meaning
	0.012%	Very high resistance to liquid penetration
	~99% Waste	Significant reduction in the need for landfilling
	4 cubic m³/h	Rapid and efficient industrial production capability

Proven Durability and Safety

Our engineered material has undergone rigorous laboratory validation. It is fully certified under ASTM C331, with comprehensive chemical test reports.
